

Tilden Solar Project Update – March 2023

Work on the substation that will allow the Tilden Solar Project to connect to the transmission grid is starting this week. The activity is being led by Ameren, not Sol Systems or Tenaska.

Final preparations are underway for the construction of the solar field, which is anticipated to begin in mid-2023. These preparations include field studies that consider the appropriate foundations for the local soil, among other things. You may see contractors in the field performing these studies. This is not construction work.

Questions or concerns about this work should be directed to local representative Stephanie Martin at stephanie@tildensolarproject.com or 618-505-6069.
