

Tilden Solar – Field Activities (June 2023)

There will be activity in the vicinity of the Tilden Solar footprint as the project team makes preparations for construction. These efforts will include:

- Drone flights over the project footprint to gather information about the topography of the land.
- Surveyors walking along streams and well sites within the project footprint.

This work is expected to begin as early as Monday, June 19 and continue through the end of the month. No motorized equipment will be used, and no crop damage is expected.

This is not construction work. These preparations help the project prepare for construction, which is anticipated to begin later this year.

Questions or concerns about these activities should be directed to local representative Stephanie Martin at stephanie@tildensolarproject.com or 618-505-6069.
